Successfully cloned in Visual Studio.

Screenshots of GitHub repository and local repository. Local screenshots shows chronological order to accessing them locally via each subfolder. Project Cereal was committed to main class folder online.

Foundational video

Open up Visual
Studio

Create a new project

C#, Windows, .NET

Console app (.NET
framework)

```
String chocoKrispis =
```

```
"Great choice!";
```

```
; closes container
```

```
C:\Users\LIB\source\repos\sai x + v
=====
PLANET CEREAL
=====

Select a cereal to reveal its country of origin:

+-----+
| CEREAL |
+-----+
|         |
| +-----+ |
| | CHOCO | |
| | KRISPIES | |
| +-----+ |
|         |
| +-----+ |
| | ;DELICIOSO! | |
| +-----+ |
|         |
+-----+

Enter the cereal name: |
```

I asked chat to help me build a visual model with text for this portion of the assignment. A visual representation is easier to follow.

A screenshot of a terminal window with a dark background and light gray text. The window's title bar shows the file path 'C:\Users\UB\source\repos\sai' and standard window controls. The terminal output consists of several lines: a separator of equals signs, the text 'GREAT CHOICE!', another separator, the message 'You selected Choco Krispies!', the text 'Country of Origin: Mexico', and a prompt 'Press Enter to return to cereal selection.' followed by a cursor line.

```
C:\Users\UB\source\repos\sai X + - □ X  
=====  
GREAT CHOICE!  
=====  
You selected Choco Krispies!  
Country of Origin: Mexico  
Press Enter to return to cereal selection.  
|
```

If you type Choco Krispies it tells you the country of origin, which is Mexico.

Screenshots of completing the C tutorial. The C tutorial asked for "Hello World." I went ahead and completed more than was needed. It is important to note that that the internal class program holds information that can be used throughout the program.

Screenshot of Visual Studio

Coding the
Console.ReadLine

Coding the
Console.WriteLine

Introducing written
context on the
console

The screenshot shows a window titled "Microsoft Visual Studio Debug Console". The text inside the console is as follows:

```
Type the cereal box you would like to buy: Choco Krispis
Choco Krispis
Country of Origin: Mexico

C:\Users\LIB\source\repos\saines007\CS077-Fall-2026-Team\02-Week-02-Systems-Online\evidence\TerminalCheck\bin\Debug\TerminalCheck.exe (process 15552) exited with code 0 (0x0).
To automatically close the console when debugging stops, enable Tools->Options->Debugging->Automatically close the console when debugging stops.
Press any key to close this window . . .|
```

Successfully completed tutorial in Console.

In this part of the assignment we successfully used the Console.ReadLine and Console.WriteLine to ask the user what type of cereal they would like.

The screenshot shows the Visual Studio IDE with a C# project named 'TerminalCheck'. The code in 'Main([string[] args])' uses `Console.ReadLine()` to get user input and `Console.WriteLine()` to display the cereal name and its country of origin. The output window shows the program running successfully, displaying 'Choco Krispis' and 'Country of Origin: Mexico'.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace TerminalCheck
{
    internal class Program
    {
        static string chocoKrispis = "Choco Krispis\n Country of Origin: Mexico";

        static void Main(string[] args)
        {
            Console.WriteLine("Type the cereal box you would like to buy: ");
            if (Console.ReadLine() == "Choco Krispis")
            {
                Console.WriteLine(chocoKrispis);
            }
            else Console.WriteLine("Sorry, we don't have that cereal box in stock.");
        }
    }
}
```

Output

```
TerminalCheck.exe (CLR v4.0.30319; DefaultDomain): Loaded 'C:\Windows\Microsoft.Net\assembly\GAC_32\mscorlib.v4.0.30319_x-ww-65958643\mscorlib.dll'. Skipped loading symbols. Module
TerminalCheck.exe (CLR v4.0.30319; DefaultDomain): Loaded 'C:\Users\LIB\source\repos\saines007\CS077-Fall-2026-Team\02-Week-02-Systems-Online\Evidence\TerminalCheck\bin\Debug\TerminalChe
TerminalCheck.exe (CLR v4.0.30319; TerminalCheck.exe): Loaded 'C:\Program Files\Microsoft Visual Studio\2019\Community\Common7\IDE\Remote Debugger\x64\Shimless\Microsoft.VisualStudio.Debug
The program '[7288] TerminalCheck.exe' has exited with code 0 (0x0).
```

The screenshot shows a Windows command prompt window titled 'Microsoft Visual Studio Debug'. It displays the output of the program, which asks for the cereal box name and prints the country of origin. The output matches the screenshot above.

```
Type the cereal box you would like to buy: Choco Krispis
Choco Krispis
Country of Origin: Mexico

C:\Users\LIB\source\repos\saines007\CS077-Fall-2026-Team\02-Week-02-Systems-Online\Evidence\TerminalCheck\bin\Debug\Term
inalCheck.exe (process 15552) exited with code 0 (0x0).
To automatically close the console when debugging stops, enable Tools->Options->Debugging->Automatically close the conso
le when debugging stops.
Press any key to close this window . . .|
```

The first screenshot of code is what I started with.

I asked Chat to help me construct the visual representation of a cereal box with ASCII that was presented earlier.

- In class work
