README.MD: AI QUESTION, CHANGE RESULT, TEST, AND NEXT STEP

REQUIRED PROMPT

I am a beginner using C# and WPF in Visual Studio with the CS077.RepeatedSignals starter. My core receiver already works. Help me add ONE Reset receiver button. It must restore PacketInput.Text to "PING;PING;DISTRESS;STOP;PING" and SignalOutput.Text to "Ready." Keep ProcessPackets unchanged. Show the smallest XAML addition and C# handler, the exact file and insertion location for each, and explain Click, x:Name, and the handler signature. Give me one test with its expected result. Do not replace my whole project. Here are my MainWindow.xaml and MainWindow.xaml.cs files: [paste only these files, with no private information].
