

RECORD EXPECTED AND OBSERVED RESULTS

TEST DATA:

01

Normal case vs conflicting case have the same test data. The test data in the context we created is physically going to the worlds to verify if Orra Quill is on either planet.

EXPECTED RESULTS:

02

- The expected result in the normal case is that we recover the Quill, with parts in another world.
- The expected result in the conflicting case is that we encounter a signal decoy. This signal decoy is meant to confuse us of the Quill's location.

OBSERVED RESULTS:

03

- The observed result in the normal case is that we find the Quill only in one world.
- The expected result in the conflicting case is that we find a complete copy of the Quill in another world.

DISCUSSION

04

The results from both cases help us construct a story and identify possible explanations of the courier record. Also, this discussion led us to discover that Orra Quill is not a bounty hunter. Orra Quill is a space craft and the courier record helped us create our story.

NORMAL CASE

TEST DATA:

GOING TO THE WORLDS

EXPECTED RESULT:

RECOVERING THE QUILL, WITH PARTS IN ANOTHER WORLD

OBSERVED RESULT:

QUILL WAS ONLY
IN 1 WORLD

CONFLICTING CASE

TEST DATA:
