

APP DEVELOPMENT // WEEK 02 // COMPLETE DURING WEEK 2. CANVAS HOLDS THE OFFICIAL DUE DATE.

Terminal Signal: Hello, World

Your first C# console application, Visual Studio, and GitHub repository

CANVAS SUBMISSION

Week 2 Terminal Signal Repository

Submit the accessible GitHub repository link through Canvas. The repository must contain the working C# project, input-and-output status check, meaningful Git history, a short README, and the required Visual Studio and running-application screenshots.

STARRED REQUIREMENTS

R1 through R5 are required. The repository is the graded project record. A missing requirement, inaccessible repository, or repository without the working source files makes the submission incomplete.

CLEARANCE CHECKLIST

Requirements

- | | | |
|--|---|--------------------------|
| R1 | ★ | ☐ |
| Create and publish the Git repository | | |
| Use Visual Studio to create a local Git repository for the C# project and publish it to your GitHub account. Give the repository a clear name, make at least one meaningful commit, and keep the repository accessible to the instructor. | | |
| R2 | ★ | ☐ |
| Complete the C# tutorial | | |
| Follow the Hello World tutorial from beginning to end. The repository must contain the complete Visual Studio project, and the program must run without errors and display the required signal. | | |
| R3 | ★ | ☐ |
| Add the terminal status check | | |
| Use Console.ReadLine to collect a terminal name, store it in a string variable, and use Console.WriteLine to display a status message containing that name. Run and test the result. | | |
| R4 | ★ | ☐ |
| Document and share the process | | |
| Add readable screenshots showing the project in Visual Studio and the application running. Add a short README that explains what the program does and how to run it. Share the repository link, a brief process note, and the requested screenshots in Discord. Crop or cover unrelated account information. | | |
| R5 | ★ | ☐ |
| Submit the repository link to Canvas | | |
| Test the repository link before submitting it. The link must let the instructor review the source files, README, screenshots, and commit history. Do not submit only a ZIP file or screenshot. | | |

Official course record: Canvas supplies the due date, accepted formats, submission, feedback, and grade.
