

APP DEVELOPMENT // WEEK 03 // SEPTEMBER 7-9, 2026 // LABOR DAY WEEK; THE GUIDED ACTION RECORD TAKES PLACE SEPTEMBER 9

Contract Logic: The Impossible Warrant

Original characters and story, WPF interface design, C# conditions, and functions

CANVAS SUBMISSION

Week 3 Contract Logic Repository

Submit one tested GitHub repository link through Canvas. Include the WPF project, original runner and story brief, illustration and source note, conditions and functions, screenshots, README, decision map, Attention First evidence, three test results, checked AI use, and collaboration record.

STARRED REQUIREMENTS

R1 through R8 are required. Every starred item must be present and readable; a missing starred requirement reduces the weekly record to one point. Submit a working illustrated WPF app that produces all three verdicts. Resource checkmarks are personal preparation reminders and do not replace assignment evidence.

CLEARANCE CHECKLIST

Requirements

- R1

★

Apply Attention First

Complete the assigned SEEK and AAA workbook pages. Save readable evidence that connects your story, starting application, build, and revision.
- R2

★

Create your runner's story

Choose a location and genre. Create an original character with a strength and limitation, an illustration, and a discovery, complication, response, and outcome.
- R3

★

Map the three decisions

Save your whiteboard map or pseudocode. Show how timestamp conflict, identity, and source verification lead to HOLD, REVIEW, or CLEAR.
- R4

★

Build the illustrated WPF app

Show your character, mission image, and story. Keep three labelled evidence controls, an Evaluate Contract button, and a readable verdict with a story consequence.
- R5

★

Write conditions and functions

Use Boolean parameters and a string return in EvaluateContract. Write if, else-if, and else branches. Adapt ExplainVerdict to your runner's story.

R6 ★**Verify HOLD, REVIEW, and CLEAR**

Record inputs and observed results: a conflict gives HOLD; missing verification gives REVIEW; all required checks agreeing gives CLEAR.

R7 Check AI and collaborate

Save a focused AI question, your test, and what you kept or rejected. Include whiteboard and Discord peer feedback, your revision, and image sources. Use the instructor's free or supplied AI response if live access is unavailable.

R8 ★**Submit the GitHub link**

Commit the complete project, images, book evidence, story brief, screenshots, and README. Push to GitHub, test access, and submit the repository link through Canvas.

Official course record: Canvas supplies the due date, accepted formats, submission, feedback, and grade.
